

infoTRAK HOS

FMCSA and DOT compliant ELD/HOS Solution

Central Drug System (CDS) selects Infospectrum's infoTRAK HOS to add Hours of Service to their DriverSocket Program to meet the ELD mandate by FMCSA for Truck Drivers.

For Immediate Release

Agoura Hills, CA - May 31, 2017- Infospectrum, a leader in Real-Time Location based Asset and Fleet Tracking Solutions and Central Drug System, a leading provider of Driver Safety, Management and Safety Rating services, announced today a comprehensive partnership that would allow CDS to offer Electronic Logging Device with Hours of Service solution as part of their DriverSocket program. With this partnership, DriverSocket will allow all of its drivers to transition from Paper Logs to Electronic Logging as mandated by Federal Motor Carrier Safety Administration.

Donald Mac Neil, Director of Marketing & Sales of DriverSocket, said, "We were looking for a reliable partner who can provide competitive FMCSA approved ELD solution and integrate with our existing systems to offer our customers who operate nationally. We are confident that this partnership will bring great value to our customers".

"This partnership will allow CDS customers to seamlessly move from paper logs to electronic logs with minimal out of pocket expense or having to use different systems. With existing Driver management system solutions provided under DriverSocket, together with *infoTRAK HOS* unique features, we are confident that customers can have a reliable and FMCSA compliant certified solution" said Mukund Halthore, Senior Vice President of Infospectrum.

About infoTRAK

Infospectrum's infoTRAK solution suite is a web based real time Fleet & Asset Tracking software and *infoTRAK HOS* is the ELD solution using always connected cellular devices for monitoring stationary and moving assets. *InfoTRAK* provides the ability for asset owners and fleet managers to track a wide range of parameters related to asset operation, maintenance and security and meet Federal Requirements for Safety. In addition to providing asset visibility, *InfoTRAK* can provide a broad set of tools such as engine diagnostic monitoring, sensor integration and activity reporting. About the CDS DriverSocket Program

Central Drug System, Inc. introduced DriverSocket program for commercial carriers to help organize and comply all at one simple location. Clients can use the DriverSocket Driver Qualification File (DQF) program to immediately reduce their overhead costs, maintain compliance and avoid any potential violations. Further, DriverSocket offers special reporting and assist clients with CHP BIT inspections, action notices and DOT audits. For more information about CDS or DriverSocket visit DriverSocket.com.
